

DIHWorld Audio

Dimensional / Impact / Move Technical Manual

Current product versions, controls, presets, meters, and placement

DIHWorld Audio builds connected production systems around the Imhotep 369 Engine—a Triadic Harmonic Lattice—and Ma'at 357 / MomentumBend. Phi-derived control and the canonical $\Phi/2$ ceiling preserve movement, balance, and musical intent without brickwall limiting.

This edition documents 3 current products. Release numbers are taken from the installed DIHWorld Audio Audio Units verified on 2026-10-05; they are product versions, not a shared catalog version.

Canon reference: normalized $\Phi/2 = 0.809016994$. MomentumBend shapes motion and containment; the ceiling is a canonical boundary, not permission for hard limiting.

Operating law: begin from reset or a purpose-matched preset, compare at equal loudness, change one system at a time, and judge the result in the full arrangement.

Depth Impact Hybrid X

RELEASE	FAMILY	PLACEMENT
v1.0.1	Dimensional / Impact / Move	Insert Safe

Six-mode spatial field for clarity, depth, low bloom, front push, hybrid pressure, fold, freeze, and source-to-horizon movement.

Recommended use: spectral clarity, harmonic depth, and hybrid spatial field

Customer formats: AU, VST3, Standalone

Exposed parameter surface

Parameter ID	Display name	Type
output	Output	Float
mode	Hybrid X Mode	Choice

Factory starting points — source-derived purpose

Balanced Field

Balanced Field — Sets a named Hybrid X depth/impact relationship for the source or bus.

Vocal Focus

Vocal Focus — Keeps a vocal forward while using the hybrid field for controlled depth.

Drum Front

Drum Front — Brings the drum front forward and preserves impact before the spatial return.

Bass Foundation

Bass Foundation — Builds a stable bass foundation with depth that remains center-safe.

Wide Atmosphere

Wide Atmosphere — Opens the atmosphere/return field for a wider, less center-bound image.

Pushback Space

Pushback Space — Moves the source deeper into the scene with Event Freeze/Echo used as motion support.

Deep Immersion

Deep Immersion — Moves the source deeper into the scene with Event Freeze/Echo used as motion support.

Hybrid Motion

Hybrid Motion — Uses Hybrid X motion to move between impact and spatial states rather than a static width boost.

Meters and visualizers

RMS FIELD: Overall sustained field energy. Shows the body of the dimensional result.

LEFT / RIGHT: Per-channel output activity. Use to spot unintended channel imbalance.

HORIZON: Depth and distant-field contribution. Higher values indicate stronger rearward space.

EVENT: Transient/front-push contribution. Higher values indicate stronger forward impact.

Immersion / Foundation / Motion: Three-part dimensional activity summary. Read together to distinguish depth, low support, and movement.

PARALLAX

RELEASE	FAMILY	PLACEMENT
v1.0.1	Dimensional / Impact / Move	Bus Preferred

Bus-preferred width and depth field with focus, spread, axis core, link, mix, and output control.

Recommended use: bus-preferred dimensional placement

Customer formats: AU, VST3

Exposed parameter surface

Parameter ID	Display name	Type
width	Width	Float
depth	Depth	Float
focus	Focus	Float
spread	Stereo Spread	Float
axis	Axis Core	Float
mix	Mix	Float

Factory starting points — source-derived purpose

Deep Space [Stereo]

Deep Space — Opens a large depth/width scene with Focus keeping the center from dissolving. Stereo variant: keep the linked center intact and audition width in the full mix.

Wormhole [Stereo]

Wormhole — Uses animated axis movement and depth to create a traveling return around the dry source. Stereo variant: keep the linked center intact and audition width in the full mix.

Nebula Shift [Stereo]

Nebula Shift — Adds soft drifting width and depth rather than a rigid stereo spread. Stereo variant: keep the linked center intact and audition width in the full mix.

Stellar Grid [Stereo]

Stellar Grid — Uses Axis Core and Focus to build a structured spatial grid. Stereo variant: keep the linked center intact and audition width in the full mix.

Planetary Orbits [Stereo]

Planetary Orbits — Links width/depth movement into a balanced orbital field. Stereo variant: keep the linked center intact and audition width in the full mix.

Light Speed [Stereo]

Light Speed — Uses faster motion and a wide spread for an energetic moving return. Stereo variant: keep the linked center intact and audition width in the full mix.

Quantum Field [Stereo]

Quantum Field — Adds fine-grained field texture with the dry center still readable. Stereo variant: keep the linked center intact and audition width in the full mix.

Dimensional Gate [Stereo]

Dimensional Gate — Opens a controlled dimensional gate, then uses Focus to keep the axis stable. Stereo variant: keep the linked center intact and audition width in the full mix.

Gravity Well [Stereo]

Gravity Well — Pulls the return inward toward a dense depth center before any final width. Stereo variant: keep the linked center intact and audition width in the full mix.

Ascension [Stereo]

Ascension — Raises the field into an open, elevated wide scene. Stereo variant: keep the linked center intact and audition width in the full mix.

Deep Space [Mono]

Deep Space — Opens a large depth/width scene with Focus keeping the center from dissolving. Mono variant: collapse the field and use it as a center-focused insert.

Wormhole [Mono]

Wormhole — Uses animated axis movement and depth to create a traveling return around the dry source. Mono variant: collapse the field and use it as a center-focused insert.

Nebula Shift [Mono]

Nebula Shift — Adds soft drifting width and depth rather than a rigid stereo spread. Mono variant: collapse the field and use it as a center-focused insert.

Stellar Grid [Mono]

Stellar Grid — Uses Axis Core and Focus to build a structured spatial grid. Mono variant: collapse the field and use it as a center-focused insert.

Planetary Orbits [Mono]

Planetary Orbits — Links width/depth movement into a balanced orbital field. Mono variant: collapse the field and use it as a center-focused insert.

Light Speed [Mono]

Light Speed — Uses faster motion and a wide spread for an energetic moving return. Mono variant: collapse the field and use it as a center-focused insert.

Quantum Field [Mono]

Quantum Field — Adds fine-grained field texture with the dry center still readable. Mono variant: collapse the field and use it as a center-focused insert.

Dimensional Gate [Mono]

Dimensional Gate — Opens a controlled dimensional gate, then uses Focus to keep the axis stable. Mono variant: collapse the field and use it as a center-focused insert.

Gravity Well [Mono]

Gravity Well — Pulls the return inward toward a dense depth center before any final width. Mono variant: collapse the field and use it as a center-focused insert.

Ascension [Mono]

Ascension — Raises the field into an open, elevated wide scene. Mono variant: collapse the field and use it as a center-focused insert.

Deep Space [Dual Mono]

Deep Space — Opens a large depth/width scene with Focus keeping the center from dissolving. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Wormhole [Dual Mono]

Wormhole — Uses animated axis movement and depth to create a traveling return around the dry source. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Nebula Shift [Dual Mono]

Nebula Shift — Adds soft drifting width and depth rather than a rigid stereo spread. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Stellar Grid [Dual Mono]

Stellar Grid — Uses Axis Core and Focus to build a structured spatial grid. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Planetary Orbits [Dual Mono]

Planetary Orbits — Links width/depth movement into a balanced orbital field. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Light Speed [Dual Mono]

Light Speed — Uses faster motion and a wide spread for an energetic moving return. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Quantum Field [Dual Mono]

Quantum Field — Adds fine-grained field texture with the dry center still readable. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Dimensional Gate [Dual Mono]

Dimensional Gate — Opens a controlled dimensional gate, then uses Focus to keep the axis stable. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Gravity Well [Dual Mono]

Gravity Well — Pulls the return inward toward a dense depth center before any final width. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Ascension [Dual Mono]

Ascension — Raises the field into an open, elevated wide scene. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Meters and visualizers

INPUT / OUTPUT: Live pre/post level. Use for level matching around the width field.

Field visualizer: Width, depth, focus, spread, and axis state. Motion shows spatial behavior; it is not a frequency plot.

NSR

RELEASE	FAMILY	PLACEMENT
v1.0.1	Dimensional / Impact / Move	Bus Preferred

Phi-ratio spatial delay and movement field combining travel, microphase, air, anchor, spread, time delay, flange, and mix.

Recommended use: phi-based spatial delay, microphase, and flange field

Customer formats: AU, VST3, Standalone

Exposed parameter surface

Parameter ID	Display name	Type
telescope	Telescope	Bool
gainmatch	Gain Match	Bool
travel	travel	Referenced
microphase	microphase	Referenced
air	air	Referenced
anchor	anchor	Referenced
spread	spread	Referenced
field	field	Referenced
timeDelay	timeDelay	Referenced
flange	flange	Referenced
mix	mix	Referenced

Factory starting points — source-derived purpose

Ankh Source Field

Ankh Source Field — Uses Telescope/Field/Anchor to establish the source field before adding timed travel.

Ra Side Light

Ra Side Light — Adds a side-light return that opens the source without moving its center.

Ausar Depth Gate

Ausar Depth Gate — Uses travel and time delay to place a deeper return behind the dry source.

Ma'at Balance

Ma'at Balance — Sets NSR's telescope, delay, phase, and field movement for the named space.

Horus Wide Eye

Horus Wide Eye — Spreads the return with controlled microphase and field movement.

Seshat Trace

Seshat Trace — Sets NSR's telescope, delay, phase, and field movement for the named space.

Thoth Phase Door

Thoth Phase Door — Uses microphase/flange movement for an orbiting, animated field.

Sekhem Phi Orbit

Sekhem Phi Orbit — Uses microphase/flange movement for an orbiting, animated field.

Neteru Full Field

Neteru Full Field — Uses Telescope/Field/Anchor to establish the source field before adding timed travel.

Chain: Depth Parallax Finish

Chain: Depth Parallax Finish — Defines NSR's position in a DIH routing chain—depth finish, vocal halo, bus tuck, or stereo motion.

Chain: Vocal Halo Motion

Chain: Vocal Halo Motion — Defines NSR's position in a DIH routing chain—depth finish, vocal halo, bus tuck, or stereo motion.

Chain: Music Bus Tuck

Chain: Music Bus Tuck — Defines NSR's position in a DIH routing chain—depth finish, vocal halo, bus tuck, or stereo motion.

Chain: Drum Return Motion

Chain: Drum Return Motion — Defines NSR's position in a DIH routing chain—depth finish, vocal halo, bus tuck, or stereo motion.

Chain: Parallel Bloom

Chain: Parallel Bloom — Defines NSR's position in a DIH routing chain—depth finish, vocal halo, bus tuck, or stereo motion.

Studio Vocal - Focus 40/55 ms

Studio Vocal - Focus 40/55 ms — Sets NSR's telescope, delay, phase, and field movement for the named space.

Studio Vocal - Double 75/105 ms

Studio Vocal - Double 75/105 ms — Sets NSR's telescope, delay, phase, and field movement for the named space.

Studio Vocal - Throw 165/230 ms

Studio Vocal - Throw 165/230 ms — Sets NSR's telescope, delay, phase, and field movement for the named space.

Studio Instrument - Pocket 60/85 ms

Studio Instrument - Pocket 60/85 ms — Sets NSR's telescope, delay, phase, and field movement for the named space.

Studio Guitar - Spread 100/140 ms

Studio Guitar - Spread 100/140 ms — Sets NSR's telescope, delay, phase, and field movement for the named space.

Studio Keys - Bloom 210/295 ms

Studio Keys - Bloom 210/295 ms — Sets NSR's telescope, delay, phase, and field movement for the named space.

Meters and visualizers

SPECTRUM: Energy across displayed frequency bands. Shows tonal distribution of the current signal.

CORRELATION: Left/right phase similarity. +1 is mono-coherent, 0 is decorrelated, negative values risk cancellation.

L / R: Channel activity. Use to detect imbalance before and after the field.

PHI FIELD VIEW: Combined spatial-field intensity. Shows overall activity of the responder.

STEREO FIELD / WIDTH: Side-to-mid spatial width. Check correlation whenever width stays high.

FIELD ACTIVITY: Wet spatial-path energy. Shows how much processed field is actually active.

DRY / WET waveform: Recent source and processed traces. Compare timing, shape, and motion between paths.

Signal Path: Activity at each processing stage. Locates where energy enters, moves, feeds back, and is contained.
