

HARMONICS PITCH

Harmonic structure, pitch, and instrument generation

Shape harmonic emphasis, rhythmic spectral motion, or generated instrument voices.

Included products: THOTH, TEHUTI, AU

Recommended route: Thoth and Tehuti are insert safe. AU is the family instrument and synth.

Family preset law: Factory presets describe musical intent and expose the useful range of the plugin. They do not change protected Input, Mix, Output, Power, or final ceiling controls unless the plugin's explicit canon requires it. Cathedral and SacredVerb retain their protected preset behavior. Preset changes must remain clickless.

THOTH

Sacred harmonic EQ with low and high shelves, visible shelf curves, Flower of Life mode, protected I/O, and parallel mix.

Preferred placement: Insert Safe. Use directly on a source or instrument channel and bypass-match before committing.

Core controls

- Power
- Input
- Mix
- Low Shelf
- High Shelf
- Output
- Flower of Life
- Gain Match

Meter and visualizer guide

These displays observe audio or processing state. They do not move controls unless the product description explicitly says otherwise.

Display	What it measures	How to read it
Spectrum bands	Live energy in each displayed EQ region	Use to see where harmonic energy is accumulating.
Shelf curves	Current low/high shelf response	These show the selected EQ shape, not measured level.
IN / OUT	Pre/post peak activity	Use for level-fair harmonic decisions.

Working method

Load a purpose-matched preset or begin from reset, bypass-match the result, then move one control at a time. Presets are starting points; protected gain and final output remain user decisions unless the plugin canon explicitly states otherwise.

TEHUTI

Harmonic motion processor using low, mid, and high ducking with depth, speed, mix, and Flower of Life mode.

Preferred placement: Insert Safe. Use directly on a source or instrument channel and bypass-match before committing.

Core controls

- Power
- Low Duck
- Mid Duck
- High Duck
- Depth
- Speed
- Mix
- Flower of Life
- Gain Match

Meter and visualizer guide

These displays observe audio or processing state. They do not move controls unless the product description explicitly says otherwise.

Display	What it measures	How to read it
INPUT	Main-program peak activity	Shows the signal being ducked.
SIDECHAIN SEND	External sidechain envelope	Confirms that the host sidechain is present.
LOW GR	Reduction below 162 Hz	Shows low-band ducking driven by the sidechain.
MID GR	Reduction from 162 Hz to 1.62 kHz	Shows mid-band ducking driven by the sidechain.
HIGH GR	Reduction above 1.62 kHz	Shows high-band ducking driven by the sidechain.
Duck curves	Expected reduction versus sidechain energy	The live dot shows the current operating point.
History	Recent sidechain and reduction motion	Use to judge pumping and release behavior.

Working method

Load a purpose-matched preset or begin from reset, bypass-match the result, then move one control at a time. Presets are starting points; protected gain and final output remain user decisions unless the plugin canon explicitly states otherwise.

AU

DIHWorld instrument and synth with factory sound selection, drag-and-drop source support, nine Neter voices, modulation, space, glide, sustain, and master control. The current AU is registered and uses smoothed output normalization.

Preferred placement: Instrument Track. Load as an instrument; use factory voices or drag-and-drop source material, then shape it inside the harmonic family.

Core controls

- Factory Sound
- PTAH
- RA
- SET
- ASAR
- MAAT
- SEKHMET
- KHNUM
- HERU

The current Audio Unit is registered for Logic and uses a prepared, per-sample output-normalization ramp so gain changes do not jump at audio-block boundaries.

Additional controls are mapped in the family technical manual.

Working method

Load a purpose-matched preset or begin from reset, bypass-match the result, then move one control at a time. Presets are starting points; protected gain and final output remain user decisions unless the plugin canon explicitly states otherwise.
