

DIHWorld Audio

Bass / Low End Technical Manual

Current product versions, controls, presets, meters, and placement

DIHWorld Audio builds connected production systems around the Imhotep 369 Engine—a Triadic Harmonic Lattice—and Ma'at 357 / MomentumBend. Phi-derived control and the canonical Phi/2 ceiling preserve movement, balance, and musical intent without brickwall limiting.

This edition documents 4 current products. Release numbers are taken from the installed DIHWorld Audio Audio Units verified on 2026-08-24; they are product versions, not a shared catalog version.

Canon reference: normalized $\Phi/2 = 0.809016994$. MomentumBend shapes motion and containment; the ceiling is a canonical boundary, not permission for hard limiting.

Operating law: begin from reset or a purpose-matched preset, compare at equal loudness, change one system at a time, and judge the result in the full arrangement.

MARIANA

RELEASE	FAMILY	PLACEMENT
v1.0.1	Bass / Low End	Low End Source

Sub and foundation processor with depth, sub pressure, kick definition, target mode, and parallel mix.

Recommended use: low-end/sub field

Customer formats: AU, VST3

Exposed parameter surface

MONOLITH

RELEASE	FAMILY	PLACEMENT
v1.0.4	Bass / Low End	Low End Source

Low-end impact and body shaper with excavation, weight, resonance, reverse motion, drive, and balance.

Recommended use: low-end mass

Customer formats: AU, VST3

Meters and visualizers

INPUT / OUTPUT: Live pre/post level. Use for bypass and level matching.

IMPACT: Low-end transient activity. Shows the punch component being produced.

WEIGHT: Sustained low-frequency body. Shows foundation rather than peak attack.

RESONANCE: Active resonant low-end energy. Persistent high readings warn of ringing.

REVERSE: Reverse-motion contribution. Shows how strongly the reverse path is active.

Monolith field: Combined low-end activity map. Reactive summary, not a spectrum analyzer.

DEPTH_BOOST_PRO

RELEASE	FAMILY	PLACEMENT
v1.0.1	Bass / Low End	Low End Source

Focused low-end depth extension built on delay-based mid/side field placement. Primary role is low-end depth and width; secondarily it is a spatial gain stage, with a dedicated Spatial Gain control (0 dB down to -12 dB) applied after the depth field, plus protected input trim.

Recommended use: low/depth support; secondarily a spatial gain plugin via its dedicated Spatial Gain control (0dB to -12dB) applied after delay-based depth/width field placement; blue secondary dot

Customer formats: AU, VST3

Meters and visualizers

Touch sphere: Depth field plus live level. Water motion follows field/level activity; sphere position remains the output control.

Spatial field: Depth, field energy, and motion. A reactive placement view, not a calibrated spectrum.

NTRPL

RELEASE	FAMILY	PLACEMENT
v1.0.1	Bass / Low End	Low End Source

Low-end transformation engine for rewrite map, novelty, interval motion, contour, shape, space, and originality guard.

Recommended use: reclassified bass family

Customer formats: AU, VST3

Meters and visualizers

SOURCE: Original input contribution. Shows how much source survives into the main route.

REWRITE: Generated harmonic-rewrite activity. Shows the newly synthesized low-end material.

ALT OUT: Alternative new-signal output. Always represents the generated signal path.

MAIN: Final blended output. Use against SOURCE for level and blend context.

Harmonic Rewriter: Live input-to-output contour. Shows source energy changing into rewritten energy.

Rewrite Map: Novelty, chord, interval, contour, motion, space, guard, and mix state. A live process map; it is not a frequency analyzer.
