

DIHWorld Audio

Vocal / Mic / Source Manual

Current product versions, controls, presets, meters, and placement

DIHWorld Audio builds connected production systems around the Imhotep 369 Engine—a Triadic Harmonic Lattice—and Ma'at 357 / MomentumBend. Phi-derived control and the canonical Phi/2 ceiling preserve movement, balance, and musical intent without brickwall limiting.

This edition documents 6 current products. Release numbers are taken from the installed DIHWorld Audio Audio Units verified on 2026-10-05; they are product versions, not a shared catalog version.

Canon reference: normalized $\Phi/2 = 0.809016994$. MomentumBend shapes motion and containment; the ceiling is a canonical boundary, not permission for hard limiting.

Operating law: begin from reset or a purpose-matched preset, compare at equal loudness, change one system at a time, and judge the result in the full arrangement.

Silver reference / Gold color / WPR adaptive ribbon

SILVER is the M50-referenced neutral comparison stage. Use it to establish an honest, level-matched baseline for vocal, acoustic, and monitoring decisions: truth, air, articulation, transient precision, and spatial reveal. It is a reference voicing, not an automatic correction or universal flat-response promise.

GOLD uses the M50-referenced input followed by deliberate color. Use it only when the arrangement benefits from harmonic body, presence, soul, weight, or dimensional lift. **GOLD** is not a substitute reference and **SILVER** is not a downstream color stage.

WPR is the pressure-responsive ribbon stage. It adapts Damping, Excursion, and Ribbon Guard to the incoming pressure envelope before the ribbon/transformer path. **WPR** is model- and price-agnostic; exact microphone correction requires measured calibration data.

Decision order: gain-match the dry source and **SILVER** first; compare **GOLD** at the same level when color is wanted; use **WPR** when pressure-responsive ribbon behavior is the intended source stage. Do not prescribe a serial **GOLD**-to-**SILVER** chain as a default.

GOLD

RELEASE	FAMILY	PLACEMENT
v1.0.1	Vocal / Mic / Source	Insert Safe

M50-referenced input response followed by deliberate harmonic color for body, presence, soul, weight, and dimensional lift. GOLD is a creative color stage, not an automatic correction or neutral reference.

Recommended use: Creative mic-color stage after a level-matched reference comparison; use only when deliberate harmonic character is wanted.

Customer formats: AU, VST3, Standalone

Primary controls

Channel Mode • Dual Mono Link • Gain Match • Source / Mic Array • Ag Air • Cu Body • Fe Weight • Au Presence • Pt Authority • Ni Focus

Factory starting points — source-derived purpose

Canon Open
Canon Open — Neutral GOLD starting point: keep the mic/source array centered and compare the color lanes at equal loudness before adding presence.

Source True
Source True — Preserves the microphone's identity while the GOLD color path stays restrained; use it as a source-first vocal or acoustic reference.

Root Anchor
Root Anchor — Centers the lower body and Fe Weight so the source has a stable foundation without a hyped top.

Earth Hold
Earth Hold — Adds grounded body and authority for thin or wandering sources; check the low-mid against the arrangement before increasing level.

Body Open
Body Open — Balances Cu Body with Ag Air so a dense source gains chest and breathing room together.

Spirit Lift
Spirit Lift — Moves emphasis toward Au Presence/Pt Authority for articulation and lift after the source has a solid center.

Sacred Push
Sacred Push — A forward, colored GOLD push for a lead that must sit above the bus; match output before deciding it is better.

Full Field
Full Field — The broadest GOLD color field: body, presence, and air are all engaged for a deliberate finished source rather than a neutral capture.

SILVER

RELEASE	FAMILY	PLACEMENT
v1.0.1	Vocal / Mic / Source	Insert Safe

M50-referenced neutral source voicing for truthful level and tone comparisons: air, articulation, transient precision, and spatial reveal. SILVER is a reference voicing, not an automatic correction or universal flat-response promise.

Recommended use: Neutral reference stage: establish a level-matched baseline before deciding whether GOLD color is musically useful.

Customer formats: AU, VST3

Primary controls

Channel Mode • Dual Mono Link • Gain Match • Truth Field • Precision • Ground • Air • Transient • Output • Input • Mix

Factory starting points — source-derived purpose

- Silver Prep [Stereo]**
Silver Prep — Silver Prep establishes the M50-referenced source center with Truth Field and Precision balanced for an honest first listen. Stereo variant: keep the linked center intact and audition width in the full mix.
- Reference Truth [Stereo]**
Reference Truth — Reference Truth minimizes deliberate color so mic identity, level, and room contribution can be judged before processing. Stereo variant: keep the linked center intact and audition width in the full mix.
- Air Open [Stereo]**
Air Open — Air Open lifts the upper reference field for openness while Ground and Truth keep the source anchored. Stereo variant: keep the linked center intact and audition width in the full mix.
- Transient Detail [Stereo]**
Transient Detail — Transient Detail favors the Precision/Transient lanes so consonants, pick, and attack can be edited without a loudness lift. Stereo variant: keep the linked center intact and audition width in the full mix.
- Vocal Reveal [Stereo]**
Vocal Reveal — Vocal Reveal brings diction and breath forward while preserving a stable vocal center. Stereo variant: keep the linked center intact and audition width in the full mix.
- String Clarity [Stereo]**
String Clarity — String Clarity exposes bow, pick, and finger detail while keeping the instrument’s body from becoming brittle. Stereo variant: keep the linked center intact and audition width in the full mix.
- Piano Glass [Stereo]**
Piano Glass — Piano Glass opens the upper piano harmonics and attack for a clean, articulated keyboard image. Stereo variant: keep the linked center intact and audition width in the full mix.
- Room Truth [Stereo]**
Room Truth — Room Truth lets the real room and stereo edges speak so ambience can be evaluated before color. Stereo variant: keep the linked center intact and audition width in the full mix.
- Source True [Stereo]**
Source True — Source True is the restrained mic-identity pass for comparing a take against the dry source. Stereo variant: keep the linked center intact and audition width in the full mix.
- Phi Balance [Stereo]**
Phi Balance — Phi Balance places Truth, Ground, Air, and Transient in a centered reference relationship for mix decisions. Stereo variant: keep the linked center intact and audition width in the full mix.
- Breath Silver [Stereo]**
Breath Silver — Breath Silver reveals low-level breath and release detail without turning the entire source into a bright effect. Stereo variant: keep the linked center intact and audition width in the full mix.
- Precision Field [Stereo]**
Precision Field — Precision Field prioritizes attack and center placement for surgical edit and translation checks. Stereo variant: keep the linked center intact and audition width in the full mix.
- Expansion Air [Stereo]**
Expansion Air — Expansion Air gives the reference field more upper openness and side information while retaining a stable center. Stereo variant: keep the linked center intact and audition width in the full mix.

Neutral Transfer [Stereo]

Neutral Transfer — Neutral Transfer is the final comparison pass: keep the source honest while checking how the take travels between systems. Stereo variant: keep the linked center intact and audition width in the full mix.

Silver Prep [Mono]

Silver Prep — Silver Prep establishes the M50-referenced source center with Truth Field and Precision balanced for an honest first listen. Mono variant: collapse the field and use it as a center-focused insert.

Reference Truth [Mono]

Reference Truth — Reference Truth minimizes deliberate color so mic identity, level, and room contribution can be judged before processing. Mono variant: collapse the field and use it as a center-focused insert.

Air Open [Mono]

Air Open — Air Open lifts the upper reference field for openness while Ground and Truth keep the source anchored. Mono variant: collapse the field and use it as a center-focused insert.

Transient Detail [Mono]

Transient Detail — Transient Detail favors the Precision/Transient lanes so consonants, pick, and attack can be edited without a loudness lift. Mono variant: collapse the field and use it as a center-focused insert.

Vocal Reveal [Mono]

Vocal Reveal — Vocal Reveal brings diction and breath forward while preserving a stable vocal center. Mono variant: collapse the field and use it as a center-focused insert.

String Clarity [Mono]

String Clarity — String Clarity exposes bow, pick, and finger detail while keeping the instrument's body from becoming brittle. Mono variant: collapse the field and use it as a center-focused insert.

Piano Glass [Mono]

Piano Glass — Piano Glass opens the upper piano harmonics and attack for a clean, articulated keyboard image. Mono variant: collapse the field and use it as a center-focused insert.

Room Truth [Mono]

Room Truth — Room Truth lets the real room and stereo edges speak so ambience can be evaluated before color. Mono variant: collapse the field and use it as a center-focused insert.

Source True [Mono]

Source True — Source True is the restrained mic-identity pass for comparing a take against the dry source. Mono variant: collapse the field and use it as a center-focused insert.

Phi Balance [Mono]

Phi Balance — Phi Balance places Truth, Ground, Air, and Transient in a centered reference relationship for mix decisions. Mono variant: collapse the field and use it as a center-focused insert.

Breath Silver [Mono]

Breath Silver — Breath Silver reveals low-level breath and release detail without turning the entire source into a bright effect. Mono variant: collapse the field and use it as a center-focused insert.

Precision Field [Mono]

Precision Field — Precision Field prioritizes attack and center placement for surgical edit and translation checks. Mono variant: collapse the field and use it as a center-focused insert.

Expansion Air [Mono]

Expansion Air — Expansion Air gives the reference field more upper openness and side information while retaining a stable center. Mono variant: collapse the field and use it as a center-focused insert.

Neutral Transfer [Mono]

Neutral Transfer — Neutral Transfer is the final comparison pass: keep the source honest while checking how the take travels between systems. Mono variant: collapse the field and use it as a center-focused insert.

Silver Prep [Dual Mono]

Silver Prep — Silver Prep establishes the M50-referenced source center with Truth Field and Precision balanced for an honest first listen. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Reference Truth [Dual Mono]

Reference Truth — Reference Truth minimizes deliberate color so mic identity, level, and room contribution can be judged before processing. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Air Open [Dual Mono]

Air Open — Air Open lifts the upper reference field for openness while Ground and Truth keep the source anchored. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Transient Detail [Dual Mono]

Transient Detail — Transient Detail favors the Precision/Transient lanes so consonants, pick, and attack can be edited without a loudness lift. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Vocal Reveal [Dual Mono]

Vocal Reveal — Vocal Reveal brings diction and breath forward while preserving a stable vocal center. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

String Clarity [Dual Mono]

String Clarity — String Clarity exposes bow, pick, and finger detail while keeping the instrument's body from becoming brittle. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Piano Glass [Dual Mono]

Piano Glass — Piano Glass opens the upper piano harmonics and attack for a clean, articulated keyboard image. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Room Truth [Dual Mono]

Room Truth — Room Truth lets the real room and stereo edges speak so ambience can be evaluated before color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Source True [Dual Mono]

Source True — Source True is the restrained mic-identity pass for comparing a take against the dry source. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Phi Balance [Dual Mono]

Phi Balance — Phi Balance places Truth, Ground, Air, and Transient in a centered reference relationship for mix decisions. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Breath Silver [Dual Mono]

Breath Silver — Breath Silver reveals low-level breath and release detail without turning the entire source into a bright effect. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Precision Field [Dual Mono]

Precision Field — Precision Field prioritizes attack and center placement for surgical edit and translation checks. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Expansion Air [Dual Mono]

Expansion Air — Expansion Air gives the reference field more upper openness and side information while retaining a stable center. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Neutral Transfer [Dual Mono]

Neutral Transfer — Neutral Transfer is the final comparison pass: keep the source honest while checking how the take travels between systems. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

RELEASE	FAMILY	PLACEMENT
v1.0.1	Vocal / Mic / Source	Insert Safe

Pressure-responsive Phi ribbon channel for any user microphone: a mechanical pressure/excursion stage responds to the incoming signal before the transformer/core model. Ribbon Damping, Ribbon Excursion, and Ribbon Guard shape recovery and transient protection without assuming a microphone price, brand, or hidden flat-response correction.

Recommended use: adaptive ribbon source shaping; use after level-matching the user mic

Customer formats: AU, VST3

Primary controls

Transformer • Ribbon Tone • Ribbon Mass • Side Width • Polar Focus • Output Trim • Air Edge • Ribbon Blend • Proximity • Ribbon Damping • Ribbon Excursion • Ribbon Guard

Factory starting points — source-derived purpose

- WP-R MKVI CANON [Stereo]**
WP-R MKVI CANON — Returns the ribbon mechanics and polar field to the controlled MKVI reference point. Stereo variant: keep the linked center intact and audition width in the full mix.
- VINTAGE VELVET [Stereo]**
VINTAGE VELVET — Softens the ribbon/transformer contour for intimate, rounded sources. Stereo variant: keep the linked center intact and audition width in the full mix.
- ROOM AMBIENCE [Stereo]**
ROOM AMBIENCE — Uses pattern, proximity, and side width to turn the ribbon into a room/ambience capture. Stereo variant: keep the linked center intact and audition width in the full mix.
- AIR EDGE [Stereo]**
AIR EDGE — Lets the upper ribbon edge speak while Damping and Guard keep bursts contained. Stereo variant: keep the linked center intact and audition width in the full mix.
- ORCHESTRAL PAIR [Stereo]**
ORCHESTRAL PAIR — Lets the upper ribbon edge speak while Damping and Guard keep bursts contained. Stereo variant: keep the linked center intact and audition width in the full mix.
- BRASS TAMER [Stereo]**
BRASS TAMER — Uses Damping and Ribbon Guard to keep brass pressure energetic but controlled. Stereo variant: keep the linked center intact and audition width in the full mix.
- VOCAL INTIMACY [Stereo]**
VOCAL INTIMACY — Sets a close, protected ribbon vocal perspective with proximity body and a stable center. Stereo variant: keep the linked center intact and audition width in the full mix.
- BROADCAST WARMTH [Stereo]**
BROADCAST WARMTH — Softens the ribbon/transformer contour for intimate, rounded sources. Stereo variant: keep the linked center intact and audition width in the full mix.
- DARK SHADOW [Stereo]**
DARK SHADOW — Uses a darker ribbon/transformer contour for harsh or over-bright sources. Stereo variant: keep the linked center intact and audition width in the full mix.
- IRON DRIVE CORE [Stereo]**
IRON DRIVE CORE — Moves the transformer and hysteresis lanes forward for deliberate iron color. Stereo variant: keep the linked center intact and audition width in the full mix.
- SILVER FOIL JENSEN [Stereo]**
SILVER FOIL JENSEN — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Stereo variant: keep the linked center intact and audition width in the full mix.
- MAGNETIC CRUNCH [Stereo]**
MAGNETIC CRUNCH — Moves the transformer and hysteresis lanes forward for deliberate iron color. Stereo variant: keep the linked center intact and audition width in the full mix.
- LUNDAHL DEEP OPEN [Stereo]**
LUNDAHL DEEP OPEN — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Stereo variant: keep

the linked center intact and audition width in the full mix.

CINEMAG FAT BOTTOM [Stereo]

CINEMAG FAT BOTTOM — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Stereo variant: keep the linked center intact and audition width in the full mix.

MU-METAL SILK [Stereo]

MU-METAL SILK — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Stereo variant: keep the linked center intact and audition width in the full mix.

HYSTERESIS HEAT [Stereo]

HYSTERESIS HEAT — Adds controlled hysteresis heat after the ribbon mechanics are stable. Stereo variant: keep the linked center intact and audition width in the full mix.

BIFILAR FOCUS [Stereo]

BIFILAR FOCUS — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

VINTAGE CORE AGE [Stereo]

VINTAGE CORE AGE — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

FIGURE 8 BLISS [Stereo]

FIGURE 8 BLISS — Favors the selected two-sided pattern for a coherent stereo pair; check mono before widening. Stereo variant: keep the linked center intact and audition width in the full mix.

BLUMLEIN CORE [Stereo]

BLUMLEIN CORE — Favors the selected two-sided pattern for a coherent stereo pair; check mono before widening. Stereo variant: keep the linked center intact and audition width in the full mix.

GUITAR CAB FOCUS [Stereo]

GUITAR CAB FOCUS — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

DRUM OVERHEAD PHI [Stereo]

DRUM OVERHEAD PHI — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

ACOUSTIC CLARITY [Stereo]

ACOUSTIC CLARITY — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

INFINITE MOMENTUM [Stereo]

INFINITE MOMENTUM — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

RESONANT SPACE [Stereo]

RESONANT SPACE — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

DIH WORLD AUDIO [Stereo]

DIH WORLD AUDIO — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

ULTRA CEILING 369 [Stereo]

ULTRA CEILING 369 — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Stereo variant: keep the linked center intact and audition width in the full mix.

WP-R MKVI CANON [Mono]

WP-R MKVI CANON — Returns the ribbon mechanics and polar field to the controlled MKVI reference point. Mono variant: collapse the field and use it as a center-focused insert.

VINTAGE VELVET [Mono]

VINTAGE VELVET — Softens the ribbon/transformer contour for intimate, rounded sources. Mono variant: collapse the field and use it as a center-focused insert.

ROOM AMBIENCE [Mono]

ROOM AMBIENCE — Uses pattern, proximity, and side width to turn the ribbon into a room/ambience capture. Mono variant: collapse the field and use it as a center-focused insert.

AIR EDGE [Mono]

AIR EDGE — Lets the upper ribbon edge speak while Damping and Guard keep bursts contained. Mono variant: collapse the field and use it as a center-focused insert.

ORCHESTRAL PAIR [Mono]

ORCHESTRAL PAIR — Lets the upper ribbon edge speak while Damping and Guard keep bursts contained. Mono variant: collapse the field and use it as a center-focused insert.

BRASS TAMER [Mono]

BRASS TAMER — Uses Damping and Ribbon Guard to keep brass pressure energetic but controlled. Mono variant: collapse the field and use it as a center-focused insert.

VOCAL INTIMACY [Mono]

VOCAL INTIMACY — Sets a close, protected ribbon vocal perspective with proximity body and a stable center. Mono variant: collapse the field and use it as a center-focused insert.

BROADCAST WARMTH [Mono]

BROADCAST WARMTH — Softens the ribbon/transformer contour for intimate, rounded sources. Mono variant: collapse the field and use it as a center-focused insert.

DARK SHADOW [Mono]

DARK SHADOW — Uses a darker ribbon/transformer contour for harsh or over-bright sources. Mono variant: collapse the field and use it as a center-focused insert.

IRON DRIVE CORE [Mono]

IRON DRIVE CORE — Moves the transformer and hysteresis lanes forward for deliberate iron color. Mono variant: collapse the field and use it as a center-focused insert.

SILVER FOIL JENSEN [Mono]

SILVER FOIL JENSEN — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Mono variant: collapse the field and use it as a center-focused insert.

MAGNETIC CRUNCH [Mono]

MAGNETIC CRUNCH — Moves the transformer and hysteresis lanes forward for deliberate iron color. Mono variant: collapse the field and use it as a center-focused insert.

LUNDAHL DEEP OPEN [Mono]

LUNDAHL DEEP OPEN — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Mono variant: collapse the field and use it as a center-focused insert.

CINEMAG FAT BOTTOM [Mono]

CINEMAG FAT BOTTOM — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Mono variant: collapse the field and use it as a center-focused insert.

MU-METAL SILK [Mono]

MU-METAL SILK — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Mono variant: collapse the field and use it as a center-focused insert.

HYSTERESIS HEAT [Mono]

HYSTERESIS HEAT — Adds controlled hysteresis heat after the ribbon mechanics are stable. Mono variant: collapse the field and use it as a center-focused insert.

BIFILAR FOCUS [Mono]

BIFILAR FOCUS — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

VINTAGE CORE AGE [Mono]

VINTAGE CORE AGE — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

FIGURE 8 BLISS [Mono]

FIGURE 8 BLISS — Favors the selected two-sided pattern for a coherent stereo pair; check mono before widening. Mono variant: collapse the field and use it as a center-focused insert.

BLUMLEIN CORE [Mono]

BLUMLEIN CORE — Favors the selected two-sided pattern for a coherent stereo pair; check mono before widening. Mono variant: collapse the field and use it as a center-focused insert.

GUITAR CAB FOCUS [Mono]

GUITAR CAB FOCUS — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

DRUM OVERHEAD PHI [Mono]

DRUM OVERHEAD PHI — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

ACOUSTIC CLARITY [Mono]

ACOUSTIC CLARITY — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

INFINITE MOMENTUM [Mono]

INFINITE MOMENTUM — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

RESONANT SPACE [Mono]

RESONANT SPACE — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

DIH WORLD AUDIO [Mono]

DIH WORLD AUDIO — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

ULTRA CEILING 369 [Mono]

ULTRA CEILING 369 — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Mono variant: collapse the field and use it as a center-focused insert.

WP-R MKVI CANON [Dual Mono]

WP-R MKVI CANON — Returns the ribbon mechanics and polar field to the controlled MKVI reference point. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

VINTAGE VELVET [Dual Mono]

VINTAGE VELVET — Softens the ribbon/transformer contour for intimate, rounded sources. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

ROOM AMBIENCE [Dual Mono]

ROOM AMBIENCE — Uses pattern, proximity, and side width to turn the ribbon into a room/ambience capture. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

AIR EDGE [Dual Mono]

AIR EDGE — Lets the upper ribbon edge speak while Damping and Guard keep bursts contained. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

ORCHESTRAL PAIR [Dual Mono]

ORCHESTRAL PAIR — Lets the upper ribbon edge speak while Damping and Guard keep bursts contained. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

BRASS TAMER [Dual Mono]

BRASS TAMER — Uses Damping and Ribbon Guard to keep brass pressure energetic but controlled. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

VOCAL INTIMACY [Dual Mono]

VOCAL INTIMACY — Sets a close, protected ribbon vocal perspective with proximity body and a stable center. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

BROADCAST WARMTH [Dual Mono]

BROADCAST WARMTH — Softens the ribbon/transformer contour for intimate, rounded sources. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

DARK SHADOW [Dual Mono]

DARK SHADOW — Uses a darker ribbon/transformer contour for harsh or over-bright sources. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

IRON DRIVE CORE [Dual Mono]

IRON DRIVE CORE — Moves the transformer and hysteresis lanes forward for deliberate iron color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

SILVER FOIL JENSEN [Dual Mono]

SILVER FOIL JENSEN — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

MAGNETIC CRUNCH [Dual Mono]

MAGNETIC CRUNCH — Moves the transformer and hysteresis lanes forward for deliberate iron color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

LUNDAHL DEEP OPEN [Dual Mono]

LUNDAHL DEEP OPEN — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

CINEMAG FAT BOTTOM [Dual Mono]

CINEMAG FAT BOTTOM — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

MU-METAL SILK [Dual Mono]

MU-METAL SILK — Chooses a named transformer/material contour while keeping the ribbon element as the source identity. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

HYSTERESIS HEAT [Dual Mono]

HYSTERESIS HEAT — Adds controlled hysteresis heat after the ribbon mechanics are stable. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

BIFILAR FOCUS [Dual Mono]

BIFILAR FOCUS — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

VINTAGE CORE AGE [Dual Mono]

VINTAGE CORE AGE — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

FIGURE 8 BLISS [Dual Mono]

FIGURE 8 BLISS — Favors the selected two-sided pattern for a coherent stereo pair; check mono before widening. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

BLUMLEIN CORE [Dual Mono]

BLUMLEIN CORE — Favors the selected two-sided pattern for a coherent stereo pair; check mono before widening. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

GUITAR CAB FOCUS [Dual Mono]

GUITAR CAB FOCUS — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

DRUM OVERHEAD PHI [Dual Mono]

DRUM OVERHEAD PHI — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

ACOUSTIC CLARITY [Dual Mono]

ACOUSTIC CLARITY — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

INFINITE MOMENTUM [Dual Mono]

INFINITE MOMENTUM — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

RESONANT SPACE [Dual Mono]

RESONANT SPACE — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

DIH WORLD AUDIO [Dual Mono]

DIH WORLD AUDIO — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

ULTRA CEILING 369 [Dual Mono]

ULTRA CEILING 369 — Sets a deliberate ribbon pressure, pattern, and transformer starting point; match the dry mic before judging color. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Meters and visualizers

PEAK: Protected output peak. Use with Gain Match and bypass to judge level fairly; it is not a gain-reduction meter.

STEREO FIELD: Polar outline plus live mid/side position. Confirm the chosen polar pattern and check mono before widening a return.

AEGIS_NOVA

RELEASE	FAMILY	PLACEMENT
v1.0.1	Vocal / Mic / Source	Insert Safe

Vocal shield for plosive and sibilance control with a restrained drive stage and parallel mix.

Recommended use: vocal/source protection and tone

Customer formats: AU, VST3

Primary controls

Gain Match • Power • Plosive • Sibilance • Drive • Mix • Channel Mode • Dual Mono Link

Factory starting points — source-derived purpose

Vocal Shield [Stereo]

Vocal Shield — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Stereo variant: keep the linked center intact and audition width in the full mix.

Plosive Deflector [Stereo]

Plosive Deflector — Prioritizes low-frequency burst protection with Plosive while leaving normal consonants open. Stereo variant: keep the linked center intact and audition width in the full mix.

Broadcast Guard [Stereo]

Broadcast Guard — Keeps spoken-word level and articulation stable for a close, consistent broadcast insert. Stereo variant: keep the linked center intact and audition width in the full mix.

Repair Field [Stereo]

Repair Field — Controls sharp consonants and upper edge with Sibilance before using Drive. Stereo variant: keep the linked center intact and audition width in the full mix.

Nova Transparent [Stereo]

Nova Transparent — Provides a light guard with minimal color for sources that already have the right tone. Stereo variant: keep the linked center intact and audition width in the full mix.

Air Lock [Stereo]

Air Lock — Controls sharp consonants and upper edge with Sibilance before using Drive. Stereo variant: keep the linked center intact and audition width in the full mix.

Rap Shield [Stereo]

Rap Shield — Holds fast consonant pressure and low-end proximity swings without dulling the delivery. Stereo variant: keep the linked center intact and audition width in the full mix.

Podcast Field [Stereo]

Podcast Field — Keeps spoken-word level and articulation stable for a close, consistent broadcast insert. Stereo variant: keep the linked center intact and audition width in the full mix.

Full Guard [Stereo]

Full Guard — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Stereo variant: keep the linked center intact and audition width in the full mix.

Bass Vocal Lock [Stereo]

Bass Vocal Lock — Protects a low vocal/bass source from burst pressure while keeping its center authoritative. Stereo variant: keep the linked center intact and audition width in the full mix.

Female Vocal [Stereo]

Female Vocal — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Stereo variant: keep the linked center intact and audition width in the full mix.

Singer Songwriter [Stereo]

Singer Songwriter — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Stereo variant: keep the linked center intact and audition width in the full mix.

Breath Detail [Stereo]

Breath Detail — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Stereo variant: keep the linked center intact and audition width in the full mix.

Stage Vocal Lock [Stereo]

Stage Vocal Lock — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Stereo variant: keep the linked center intact and audition

width in the full mix.

Vocal Shield [Mono]

Vocal Shield — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Mono variant: collapse the field and use it as a center-focused insert.

Plosive Deflector [Mono]

Plosive Deflector — Prioritizes low-frequency burst protection with Plosive while leaving normal consonants open. Mono variant: collapse the field and use it as a center-focused insert.

Broadcast Guard [Mono]

Broadcast Guard — Keeps spoken-word level and articulation stable for a close, consistent broadcast insert. Mono variant: collapse the field and use it as a center-focused insert.

Repair Field [Mono]

Repair Field — Controls sharp consonants and upper edge with Sibilance before using Drive. Mono variant: collapse the field and use it as a center-focused insert.

Nova Transparent [Mono]

Nova Transparent — Provides a light guard with minimal color for sources that already have the right tone. Mono variant: collapse the field and use it as a center-focused insert.

Air Lock [Mono]

Air Lock — Controls sharp consonants and upper edge with Sibilance before using Drive. Mono variant: collapse the field and use it as a center-focused insert.

Rap Shield [Mono]

Rap Shield — Holds fast consonant pressure and low-end proximity swings without dulling the delivery. Mono variant: collapse the field and use it as a center-focused insert.

Podcast Field [Mono]

Podcast Field — Keeps spoken-word level and articulation stable for a close, consistent broadcast insert. Mono variant: collapse the field and use it as a center-focused insert.

Full Guard [Mono]

Full Guard — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Mono variant: collapse the field and use it as a center-focused insert.

Bass Vocal Lock [Mono]

Bass Vocal Lock — Protects a low vocal/bass source from burst pressure while keeping its center authoritative. Mono variant: collapse the field and use it as a center-focused insert.

Female Vocal [Mono]

Female Vocal — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Mono variant: collapse the field and use it as a center-focused insert.

Singer Songwriter [Mono]

Singer Songwriter — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Mono variant: collapse the field and use it as a center-focused insert.

Breath Detail [Mono]

Breath Detail — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Mono variant: collapse the field and use it as a center-focused insert.

Stage Vocal Lock [Mono]

Stage Vocal Lock — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Mono variant: collapse the field and use it as a center-focused insert.

Vocal Shield [Dual Mono]

Vocal Shield — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Plosive Deflector [Dual Mono]

Plosive Deflector — Prioritizes low-frequency burst protection with Plosive while leaving normal consonants open. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Broadcast Guard [Dual Mono]

Broadcast Guard — Keeps spoken-word level and articulation stable for a close, consistent broadcast insert. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Repair Field [Dual Mono]

Repair Field — Controls sharp consonants and upper edge with Sibilance before using Drive. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Nova Transparent [Dual Mono]

Nova Transparent — Provides a light guard with minimal color for sources that already have the right tone. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Air Lock [Dual Mono]

Air Lock — Controls sharp consonants and upper edge with Sibilance before using Drive. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Rap Shield [Dual Mono]

Rap Shield — Holds fast consonant pressure and low-end proximity swings without dulling the delivery. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Podcast Field [Dual Mono]

Podcast Field — Keeps spoken-word level and articulation stable for a close, consistent broadcast insert. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Full Guard [Dual Mono]

Full Guard — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Bass Vocal Lock [Dual Mono]

Bass Vocal Lock — Protects a low vocal/bass source from burst pressure while keeping its center authoritative. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Female Vocal [Dual Mono]

Female Vocal — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Singer Songwriter [Dual Mono]

Singer Songwriter — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Breath Detail [Dual Mono]

Breath Detail — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Stage Vocal Lock [Dual Mono]

Stage Vocal Lock — Sets a vocal guard balance between plosive, sibilance, and controlled drive. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Meters and visualizers

INPUT: Incoming peak activity. Confirms source level reaching the shield.

NOVA: Detected plosive/sibilant activity. More light means stronger shield intervention.

TRIPLER

RELEASE	FAMILY	PLACEMENT
v3.5.7	Vocal / Mic / Source	Insert Safe

Three-voice vocal harmonizer with key, scale, chord, pitch correction, voice gain, pan, fine tune, and Phi field control. The current left/right voices use the repaired high-quality overlap-add pitch path for clean stereo harmonies.

Recommended use: vocal/mic array enhancement

Customer formats: AU, VST3

Primary controls

DIATONIC • CHORD • KEY • SCALE • L_GAIN • R_GAIN • C_GAIN • L_PAN • R_PAN • BYPASS • PITCH_CORRECT • PC_AMOUNT

Factory starting points — source-derived purpose

Default [Stereo]

Default — Returns the three voice lanes to the canonical harmony starting point. Stereo variant: keep the linked center intact and audition width in the full mix.

Wide Open [Stereo]

Wide Open — Uses the three voice gains, pans, and pitch rules to create a controlled harmonic stack. Stereo variant: keep the linked center intact and audition width in the full mix.

Gospel 3rds [Major] [Stereo]

Gospel 3rds — Builds a major third-based gospel stack with the dry source retained as the center. Major variant: keep the harmony lanes in the major-scale/chord rule shown by the preset. Stereo variant: keep the linked center intact and audition width in the full mix.

R&B Minor Bed [Stereo]

R&B Minor Bed — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Stereo variant: keep the linked center intact and audition width in the full mix.

Soul Dom 7 [Stereo]

Soul Dom 7 — Uses a seventh chord relationship for a richer, less plain harmony stack. Stereo variant: keep the linked center intact and audition width in the full mix.

Trap Major 7 [Stereo]

Trap Major 7 — Uses the three voice gains, pans, and pitch rules to create a controlled harmonic stack. Stereo variant: keep the linked center intact and audition width in the full mix.

Trap Minor 7 [Stereo]

Trap Minor 7 — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Stereo variant: keep the linked center intact and audition width in the full mix.

Lo Seventh Bed [Stereo]

Lo Seventh Bed — Uses a seventh chord relationship for a richer, less plain harmony stack. Stereo variant: keep the linked center intact and audition width in the full mix.

Pop Fifth Stack [Stereo]

Pop Fifth Stack — Uses fifths for a clean, stable pop stack that leaves room around the lead. Stereo variant: keep the linked center intact and audition width in the full mix.

Streaming Ready [Stereo]

Streaming Ready — A restrained harmony stack designed to translate cleanly at normal streaming level. Stereo variant: keep the linked center intact and audition width in the full mix.

Vinyl Warm [Stereo]

Vinyl Warm — Adds a softer, less clinical harmony blend with the three voices kept compact. Stereo variant: keep the linked center intact and audition width in the full mix.

357 Canon [Full] [Stereo]

357 Canon — Returns the three voice lanes to the canonical harmony starting point. Full variant: the complete mapped field is engaged rather than a reduced demonstration lane. Stereo variant: keep the linked center intact and audition width in the full mix.

357 Diatonic Major [Stereo]

357 Diatonic Major — Follows the selected key/scale rather than fixed intervals, keeping the harmony musical across notes. Stereo variant: keep the linked center intact and audition width in the full mix.

357 Diatonic Minor [Stereo]

357 Diatonic Minor — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Stereo variant: keep the linked center intact and audition width in the full mix.

Default [Mono]

Default — Returns the three voice lanes to the canonical harmony starting point. Mono variant: collapse the field and use it as a center-focused insert.

Wide Open [Mono]

Wide Open — Uses the three voice gains, pans, and pitch rules to create a controlled harmonic stack. Mono variant: collapse the field and use it as a center-focused insert.

Gospel 3rds [Major] [Mono]

Gospel 3rds — Builds a major third-based gospel stack with the dry source retained as the center. Major variant: keep the harmony lanes in the major-scale/chord rule shown by the preset. Mono variant: collapse the field and use it as a center-focused insert.

R&B Minor Bed [Mono]

R&B Minor Bed — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Mono variant: collapse the field and use it as a center-focused insert.

Soul Dom 7 [Mono]

Soul Dom 7 — Uses a seventh chord relationship for a richer, less plain harmony stack. Mono variant: collapse the field and use it as a center-focused insert.

Trap Major 7 [Mono]

Trap Major 7 — Uses the three voice gains, pans, and pitch rules to create a controlled harmonic stack. Mono variant: collapse the field and use it as a center-focused insert.

Trap Minor 7 [Mono]

Trap Minor 7 — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Mono variant: collapse the field and use it as a center-focused insert.

Lo Seventh Bed [Mono]

Lo Seventh Bed — Uses a seventh chord relationship for a richer, less plain harmony stack. Mono variant: collapse the field and use it as a center-focused insert.

Pop Fifth Stack [Mono]

Pop Fifth Stack — Uses fifths for a clean, stable pop stack that leaves room around the lead. Mono variant: collapse the field and use it as a center-focused insert.

Streaming Ready [Mono]

Streaming Ready — A restrained harmony stack designed to translate cleanly at normal streaming level. Mono variant: collapse the field and use it as a center-focused insert.

Vinyl Warm [Mono]

Vinyl Warm — Adds a softer, less clinical harmony blend with the three voices kept compact. Mono variant: collapse the field and use it as a center-focused insert.

357 Canon [Full] [Mono]

357 Canon — Returns the three voice lanes to the canonical harmony starting point. Full variant: the complete mapped field is engaged rather than a reduced demonstration lane. Mono variant: collapse the field and use it as a center-focused insert.

357 Diatonic Major [Mono]

357 Diatonic Major — Follows the selected key/scale rather than fixed intervals, keeping the harmony musical across notes. Mono variant: collapse the field and use it as a center-focused insert.

357 Diatonic Minor [Mono]

357 Diatonic Minor — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Mono variant: collapse the field and use it as a center-focused insert.

Default [Dual Mono]

Default — Returns the three voice lanes to the canonical harmony starting point. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Wide Open [Dual Mono]

Wide Open — Uses the three voice gains, pans, and pitch rules to create a controlled harmonic stack. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Gospel 3rds [Major] [Dual Mono]

Gospel 3rds — Builds a major third-based gospel stack with the dry source retained as the center. Major variant: keep the harmony lanes in the major-scale/chord rule shown by the preset. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

R&B Minor Bed [Dual Mono]

R&B Minor Bed — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Soul Dom 7 [Dual Mono]

Soul Dom 7 — Uses a seventh chord relationship for a richer, less plain harmony stack. Dual-mono variant: preserve independent left/right decisions for

asymmetric sources.

Trap Major 7 [Dual Mono]

Trap Major 7 — Uses the three voice gains, pans, and pitch rules to create a controlled harmonic stack. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Trap Minor 7 [Dual Mono]

Trap Minor 7 — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Lo Seventh Bed [Dual Mono]

Lo Seventh Bed — Uses a seventh chord relationship for a richer, less plain harmony stack. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Pop Fifth Stack [Dual Mono]

Pop Fifth Stack — Uses fifths for a clean, stable pop stack that leaves room around the lead. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Streaming Ready [Dual Mono]

Streaming Ready — A restrained harmony stack designed to translate cleanly at normal streaming level. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

Vinyl Warm [Dual Mono]

Vinyl Warm — Adds a softer, less clinical harmony blend with the three voices kept compact. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

357 Canon [Full] [Dual Mono]

357 Canon — Returns the three voice lanes to the canonical harmony starting point. Full variant: the complete mapped field is engaged rather than a reduced demonstration lane. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

357 Diatonic Major [Dual Mono]

357 Diatonic Major — Follows the selected key/scale rather than fixed intervals, keeping the harmony musical across notes. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

357 Diatonic Minor [Dual Mono]

357 Diatonic Minor — Builds a minor harmony bed for R&B/trap color; verify the key before committing. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

EchoLocate

RELEASE	FAMILY	PLACEMENT
v1.0.1	Vocal / Mic / Source	Insert Safe

Three-position source-placement processor for spread, drift, microphone gain, proximity, pan, and reflected-space mix.

Recommended use: source localization

Customer formats: AU, VST3

Primary controls

MODE • SPREAD • DRIFT • MIX • MIC1_GAIN • MIC2_GAIN • MIC3_GAIN • MIC2_PROX • MIC3_PAN • OUT_GAIN • channelmode • dualmonolink

Factory starting points — source-derived purpose

ECHOLOCATE CANON [Stereo]

ECHOLOCATE CANON — Sets a named mic-array/echo location with MODE, SPREAD, DRIFT, and per-mic gains. Stereo variant: keep the linked center intact and audition width in the full mix.

CLOSE CENTER [Stereo]

CLOSE CENTER — Keeps the source close and centered, using only enough echo position to add location. Stereo variant: keep the linked center intact and audition width in the full mix.

WIDE CALL [Stereo]

WIDE CALL — Moves the call/response image outward with spread and mic pan rather than simply increasing mix. Stereo variant: keep the linked center intact and audition width in the full mix.

TRIPLE ROOM [Stereo]

TRIPLE ROOM — Uses all three mic positions to create a room return with deliberate spread and depth. Stereo variant: keep the linked center intact and audition width in the full mix.

CHEST LOCK [Stereo]

CHEST LOCK — Favors the low/close mic perspective for body and proximity. Stereo variant: keep the linked center intact and audition width in the full mix.

HEAD AIR [Stereo]

HEAD AIR — Favors the higher/air mic perspective for articulation and top-end placement. Stereo variant: keep the linked center intact and audition width in the full mix.

WALL RETURN [Stereo]

WALL RETURN — Treats the echo as a wall/return behind the dry source. Stereo variant: keep the linked center intact and audition width in the full mix.

FOCUS FINDER [Stereo]

FOCUS FINDER — Sets a named mic-array/echo location with MODE, SPREAD, DRIFT, and per-mic gains. Stereo variant: keep the linked center intact and audition width in the full mix.

PHI PREPARATION [Stereo]

PHI PREPARATION — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Stereo variant: keep the linked center intact and audition width in the full mix.

PHI HOME [Stereo]

PHI HOME — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Stereo variant: keep the linked center intact and audition width in the full mix.

PHI OPEN [Stereo]

PHI OPEN — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Stereo variant: keep the linked center intact and audition width in the full mix.

PHI ACTIVE [Stereo]

PHI ACTIVE — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Stereo variant: keep the linked center intact and audition width in the full mix.

PHI PUSH [Stereo]

PHI PUSH — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Stereo variant: keep the linked center intact and audition width in the full mix.

PHI EXPANSION [Stereo]

PHI EXPANSION — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Stereo variant: keep the linked center intact and audition width in the full mix.

ECHOLOCATE CANON [Mono]

ECHOLOCATE CANON — Sets a named mic-array/echo location with MODE, SPREAD, DRIFT, and per-mic gains. Mono variant: collapse the field and use it as a center-focused insert.

CLOSE CENTER [Mono]

CLOSE CENTER — Keeps the source close and centered, using only enough echo position to add location. Mono variant: collapse the field and use it as a center-focused insert.

WIDE CALL [Mono]

WIDE CALL — Moves the call/response image outward with spread and mic pan rather than simply increasing mix. Mono variant: collapse the field and use it as a center-focused insert.

TRIPLE ROOM [Mono]

TRIPLE ROOM — Uses all three mic positions to create a room return with deliberate spread and depth. Mono variant: collapse the field and use it as a center-focused insert.

CHEST LOCK [Mono]

CHEST LOCK — Favors the low/close mic perspective for body and proximity. Mono variant: collapse the field and use it as a center-focused insert.

HEAD AIR [Mono]

HEAD AIR — Favors the higher/air mic perspective for articulation and top-end placement. Mono variant: collapse the field and use it as a center-focused insert.

WALL RETURN [Mono]

WALL RETURN — Treats the echo as a wall/return behind the dry source. Mono variant: collapse the field and use it as a center-focused insert.

FOCUS FINDER [Mono]

FOCUS FINDER — Sets a named mic-array/echo location with MODE, SPREAD, DRIFT, and per-mic gains. Mono variant: collapse the field and use it as a center-focused insert.

PHI PREPARATION [Mono]

PHI PREPARATION — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Mono variant: collapse the field and use it as a center-focused insert.

PHI HOME [Mono]

PHI HOME — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Mono variant: collapse the field and use it as a center-focused insert.

PHI OPEN [Mono]

PHI OPEN — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Mono variant: collapse the field and use it as a center-focused insert.

PHI ACTIVE [Mono]

PHI ACTIVE — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Mono variant: collapse the field and use it as a center-focused insert.

PHI PUSH [Mono]

PHI PUSH — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Mono variant: collapse the field and use it as a center-focused insert.

PHI EXPANSION [Mono]

PHI EXPANSION — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Mono variant: collapse the field and use it as a center-focused insert.

ECHOLOCATE CANON [Dual Mono]

ECHOLOCATE CANON — Sets a named mic-array/echo location with MODE, SPREAD, DRIFT, and per-mic gains. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

CLOSE CENTER [Dual Mono]

CLOSE CENTER — Keeps the source close and centered, using only enough echo position to add location. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

WIDE CALL [Dual Mono]

WIDE CALL — Moves the call/response image outward with spread and mic pan rather than simply increasing mix. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

TRIPLE ROOM [Dual Mono]

TRIPLE ROOM — Uses all three mic positions to create a room return with deliberate spread and depth. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

CHEST LOCK [Dual Mono]

CHEST LOCK — Favors the low/close mic perspective for body and proximity. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

HEAD AIR [Dual Mono]

HEAD AIR — Favors the higher/air mic perspective for articulation and top-end placement. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

WALL RETURN [Dual Mono]

WALL RETURN — Treats the echo as a wall/return behind the dry source. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

FOCUS FINDER [Dual Mono]

FOCUS FINDER — Sets a named mic-array/echo location with MODE, SPREAD, DRIFT, and per-mic gains. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

PHI PREPARATION [Dual Mono]

PHI PREPARATION — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

PHI HOME [Dual Mono]

PHI HOME — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

PHI OPEN [Dual Mono]

PHI OPEN — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

PHI ACTIVE [Dual Mono]

PHI ACTIVE — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

PHI PUSH [Dual Mono]

PHI PUSH — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.

PHI EXPANSION [Dual Mono]

PHI EXPANSION — Uses the Phi scene as a controlled echo-position starting point; adjust delay only after level matching. Dual-mono variant: preserve independent left/right decisions for asymmetric sources.
