

DIHWorld Audio

Dimensional / Impact / Move Manual

Current product versions, controls, presets, meters, and placement

DIHWorld Audio builds connected production systems around the Imhotep 369 Engine—a Triadic Harmonic Lattice—and Ma'at 357 / MomentumBend. Phi-derived control and the canonical Phi/2 ceiling preserve movement, balance, and musical intent without brickwall limiting.

This edition documents 3 current products. Release numbers are taken from the installed DIHWorld Audio Audio Units verified on 2026-09-05; they are product versions, not a shared catalog version.

Canon reference: normalized $\Phi/2 = 0.809016994$. MomentumBend shapes motion and containment; the ceiling is a canonical boundary, not permission for hard limiting.

Operating law: begin from reset or a purpose-matched preset, compare at equal loudness, change one system at a time, and judge the result in the full arrangement.

Depth Impact Hybrid X

RELEASE	FAMILY	PLACEMENT
v1.0.3	Dimensional / Impact / Move	Insert Safe

Six-mode spatial field for clarity, depth, low bloom, front push, hybrid pressure, fold, freeze, and source-to-horizon movement.

Recommended use: spectral clarity, harmonic depth, and hybrid spatial field

Customer formats: AU, VST3, Standalone

Primary controls

Output • Hybrid X Mode • Channel Mode • Dual Mono Link • Horizon Fold • Event Freeze • Echo • CPU Saver • Bypass • Gain Match • spectralClarity • spatialDepth

Factory starting points

Balanced Field • Vocal Focus • Drum Front • Bass Foundation • Wide Atmosphere • Pushback Space • Deep Immersion • Hybrid Motion

Meters and visualizers

RMS FIELD: Overall sustained field energy. Shows the body of the dimensional result.

LEFT / RIGHT: Per-channel output activity. Use to spot unintended channel imbalance.

HORIZON: Depth and distant-field contribution. Higher values indicate stronger rearward space.

EVENT: Transient/front-push contribution. Higher values indicate stronger forward impact.

Immersion / Foundation / Motion: Three-part dimensional activity summary. Read together to distinguish depth, low support, and movement.

PARALLAX

RELEASE	FAMILY	PLACEMENT
v1.0.3	Dimensional / Impact / Move	Bus Preferred

Bus-preferred width and depth field with focus, spread, axis core, link, mix, and output control.

Recommended use: bus-preferred dimensional placement

Customer formats: AU, VST3

Primary controls

Width • Depth • Focus • Stereo Spread • Axis Core • Mix • Output • Field Link • Power • Gain Match • Channel Mode • Dual Mono Link

Factory starting points

Deep Space [Stereo] • Wormhole [Stereo] • Nebula Shift [Stereo] • Stellar Grid [Stereo] • Planetary Orbits [Stereo] • Light Speed [Stereo] • Quantum Field [Stereo] • Dimensional Gate [Stereo] • Gravity Well [Stereo] • Ascension [Stereo] • Deep Space [Mono] • Wormhole [Mono] • Nebula Shift [Mono] • Stellar Grid [Mono] • Planetary Orbits [Mono] • Light Speed [Mono] • Quantum Field [Mono] • Dimensional Gate [Mono] • Gravity Well [Mono] • Ascension [Mono] • Deep Space [Dual Mono] • Wormhole [Dual Mono] • Nebula Shift [Dual Mono] • Stellar Grid [Dual Mono] • Planetary Orbits [Dual Mono] • Light Speed [Dual Mono] • Quantum Field [Dual Mono] • Dimensional Gate [Dual Mono] • Gravity Well [Dual Mono] • Ascension [Dual Mono]

Meters and visualizers

INPUT / OUTPUT: Live pre/post level. Use for level matching around the width field.

Field visualizer: Width, depth, focus, spread, and axis state. Motion shows spatial behavior; it is not a frequency plot.

NSR

RELEASE	FAMILY	PLACEMENT
v1.0.2	Dimensional / Impact / Move	Bus Preferred

Phi-ratio spatial delay and movement field combining travel, microphase, air, anchor, spread, time delay, flange, and mix.

Recommended use: phi-based spatial delay, microphase, and flange field

Customer formats: AU, VST3, Standalone

Primary controls

Telescope • Gain Match • travel • microphase • air • anchor • spread • field • timeDelay • flange • mix

Factory starting points

Ankh Source Field • Ra Side Light • Ausar Depth Gate • Ma'at Balance • Horus Wide Eye • Seshat Trace • Thoth Phase Door • Sekhem Phi Orbit • Neteru Full Field

Meters and visualizers

SPECTRUM: Energy across displayed frequency bands. Shows tonal distribution of the current signal.

CORRELATION: Left/right phase similarity. +1 is mono-coherent, 0 is decorrelated, negative values risk cancellation.

L / R: Channel activity. Use to detect imbalance before and after the field.

PHI FIELD VIEW: Combined spatial-field intensity. Shows overall activity of the responder.

STEREO FIELD / WIDTH: Side-to-mid spatial width. Check correlation whenever width stays high.

FIELD ACTIVITY: Wet spatial-path energy. Shows how much processed field is actually active.

DRY / WET waveform: Recent source and processed traces. Compare timing, shape, and motion between paths.

Signal Path: Activity at each processing stage. Locates where energy enters, moves, feeds back, and is contained.
