

DIHWorld Audio

Vocal / Mic / Source Manual

Current product versions, controls, presets, meters, and placement

DIHWorld Audio builds connected production systems around the Imhotep 369 Engine—a Triadic Harmonic Lattice—and Ma'at 357 / MomentumBend. Phi-derived control and the canonical Phi/2 ceiling preserve movement, balance, and musical intent without brickwall limiting.

This edition documents 6 current products. Release numbers are taken from the installed DIHWorld Audio Audio Units verified on 2026-10-05; they are product versions, not a shared catalog version.

Canon reference: normalized $\Phi/2 = 0.809016994$. MomentumBend shapes motion and containment; the ceiling is a canonical boundary, not permission for hard limiting.

Operating law: begin from reset or a purpose-matched preset, compare at equal loudness, change one system at a time, and judge the result in the full arrangement.

Silver reference / Gold color / WPR adaptive ribbon

SILVER is the M50-referenced neutral comparison stage. Use it to establish an honest, level-matched baseline for vocal, acoustic, and monitoring decisions: truth, air, articulation, transient precision, and spatial reveal. It is a reference voicing, not an automatic correction or universal flat-response promise.

GOLD uses the M50-referenced input followed by deliberate color. Use it only when the arrangement benefits from harmonic body, presence, soul, weight, or dimensional lift. **GOLD** is not a substitute reference and **SILVER** is not a downstream color stage.

WPR is the pressure-responsive ribbon stage. It adapts Damping, Excursion, and Ribbon Guard to the incoming pressure envelope before the ribbon/transformer path. **WPR** is model- and price-agnostic; exact microphone correction requires measured calibration data.

Decision order: gain-match the dry source and **SILVER** first; compare **GOLD** at the same level when color is wanted; use **WPR** when pressure-responsive ribbon behavior is the intended source stage. Do not prescribe a serial **GOLD**-to-**SILVER** chain as a default.

GOLD

RELEASE	FAMILY	PLACEMENT
v1.0.1	Vocal / Mic / Source	Insert Safe

M50-referenced input response followed by deliberate harmonic color for body, presence, soul, weight, and dimensional lift. GOLD is a creative color stage, not an automatic correction or neutral reference.

Recommended use: Creative mic-color stage after a level-matched reference comparison; use only when deliberate harmonic character is wanted.

Customer formats: AU, VST3, Standalone

Primary controls

Channel Mode • Dual Mono Link • Gain Match • Source / Mic Array • Ag Air • Cu Body • Fe Weight • Au Presence • Pt Authority • Ni Focus

SILVER

RELEASE	FAMILY	PLACEMENT
v1.0.1	Vocal / Mic / Source	Insert Safe

M50-referenced neutral source voicing for truthful level and tone comparisons: air, articulation, transient precision, and spatial reveal. SILVER is a reference voicing, not an automatic correction or universal flat-response promise.

Recommended use: Neutral reference stage: establish a level-matched baseline before deciding whether GOLD color is musically useful.

Customer formats: AU, VST3

v1.0.1	Vocal / Mic / Source	Insert Safe

Pressure-responsive Phi ribbon channel for any user microphone: a mechanical pressure/excursion stage responds to the incoming signal before the transformer/core model. Ribbon Damping, Ribbon Excursion, and Ribbon Guard shape recovery and transient protection without assuming a microphone price, brand, or hidden flat-response correction.

Recommended use: adaptive ribbon source shaping; use after level-matching the user mic

Customer formats: AU, VST3

Primary controls

Transformer • Ribbon Tone • Ribbon Mass • Side Width • Polar Focus • Output Trim • Air Edge • Ribbon Blend • Proximity • Ribbon Damping • Ribbon Excursion • Ribbon Guard

Meters and visualizers

PEAK: Protected output peak. Use with Gain Match and bypass to judge level fairly; it is not a gain-reduction meter.

STEREO FIELD: Polar outline plus live mid/side position. Confirm the chosen polar pattern and check mono before widening a return.

AEGIS_NOVA

RELEASE	FAMILY	PLACEMENT
v1.0.1	Vocal / Mic / Source	Insert Safe

Vocal shield for plosive and sibilance control with a restrained drive stage and parallel mix.

Recommended use: vocal/source protection and tone

Customer formats: AU, VST3

Primary controls

Gain Match • Power • Plosive • Sibilance • Drive • Mix • Channel Mode • Dual Mono Link

Meters and visualizers

INPUT: Incoming peak activity. Confirms source level reaching the shield.

NOVA: Detected plosive/sibilant activity. More light means stronger shield intervention.

TRIPLER

RELEASE	FAMILY	PLACEMENT
v3.5.7	Vocal / Mic / Source	Insert Safe

Three-voice vocal harmonizer with key, scale, chord, pitch correction, voice gain, pan, fine tune, and Phi field control. The current left/right voices use the repaired high-quality overlap-add pitch path for clean stereo harmonies.

Recommended use: vocal/mic array enhancement

Customer formats: AU, VST3

Primary controls
