

DIHWorld Better Bus Set - Current

Customer-safe bus starters | Current ANKH families | Website companion Updated: 2026-08-01

Purpose: cleaner Logic buses using current DIHWorld Audio plugin names, descriptive bus labels, shorter chains, and the current gain-matching rule.

Core rule: start buses around -18 dB so users can hear the DIH enhancement safely. Raise level only when the processor, source, and FieldState call for it. Some use cases may work hotter, even at unity, but approve unity only after output-matching to bypass and confirming no clipping, ringing, or level jump.

Recommended Main Routing

Source tracks
-> Drum Bus / Bass Bus / Lead Vocal Bus / BG Vocal Bus / Instrument Bus
-> optional sends to FX Bus, Color Bus, Width Bus, or Dynamics Bus
Family buses
-> Print / Master Bus
Print / Master Bus
-> Stereo Out

Customer Bus Starters

Lead Vocal Bus	SILVER M50 reference baseline; optional GOLD -> AegisNova	Gain-match SILVER and GOLD before choosing color. WPR is a separate ribbon-color option, not a replacement for the reference baseline.
BG Vocal Bus	GOLD -> TRIPLER -> EchoLocate	Stacks, doubles, and localization. Keep lead diction clear.
Drum Bus	Drum Morpher -> Ballpark -> DrumKrushGlue	Drum identity, punch, and glue. Use ANUBIS before the bus when transient guard is needed.
Bass Bus	MARIANA -> MONOLITH	Low-end focus without color pileup. DEPTH_BOOST_PRO may replace MONOLITH for definition. NTRPL is an optional earlier Harmonics & Pitch source insert.
Instrument Bus	Khepri Sacred Tape Machine -> PtahTube -> APIS	Music-bed tone, body, and harmonic color.
FX Bus	NTRSTLLR -> Cathedral -> SacredVerb	Shared spatial identity and room field. Keep reverbs on a bus.
Color Bus	Khepri Sacred Tape Machine -> PtahTube -> APIS	Parallel tone and bus color. SOVEREIGN replaces one slot for stronger color authority.
Width Bus	Depth Impact Hybrid X -> PARALLAX -> NSR	Width, placement, and front/back movement. SERQET can replace PARALLAX for a creative width move.
Dynamics Bus	ANUBIS -> OTIS -> DeBo	Parallel guard and movement. LOOKOUT may observe.
Print / Master Bus	Choose Prepare -> Balance/Field -> ANKH; SESHAT observes	Use no more than three active stages. See the mastering choices below.

Mastering Choices

Prepare	SPHYNX or PLATINUM	Normalize/calibrate or establish mastering authority.
Balance / Field	Maat, IMHOTEP, Horizon X, or Depth Impact Hybrid X	Choose the one job the print still needs.

Contain	ANKH	Final containment authority.
Observe	SESHAT	Last in line, observation only; not counted as an active processor.

Examples: SPHYNX -> Maat -> ANKH -> SESHAT, PLATINUM -> IMHOTEP -> ANKH -> SESHAT, or SPHYNX -> Horizon X -> ANKH -> SESHAT.

Logic Use

- Keep descriptive bus names so another user can understand the session quickly.
- Keep source tracks lean and put shared color, space, width, and dynamics on buses.
- Use up to three active processors on a source track or bus during a musical pass. Extra inserts are audition alternates, not the committed chain.
- Keep SESHAT last as observation only.
- Keep ANKH as final containment authority.
- If a bus does not clearly help at matched loudness, bypass it or use a simpler chain.
