THOTH

USER MANUAL | VERSION 1.0.1 | 2026-09-01

Purpose

A seven-band harmonic EQ field with low and high shelves, visible response curves, Flower of Life character, protected I/O, and parallel mix.

Fast Start

Start from a program matching the source role. Bypass-match, then refine the field and shelves together. Programs leave Input, Mix, Output, Power, and the legacy Flower lane untouched.

Controls

Control	Use
Seven-band field	Build a complete tonal contour rather than a one-knob correction.
Low / High Shelf	Set foundation and air around the seven-band decision.
Flower of Life	Adds the optional harmonic character layer.
Channel Mode	Choose Mono, Stereo, or Dual Mono before making a linked decision.
Gain Match	Use for a fair bypass comparison.

Installation

Quit Logic Pro before installing the signed package. Install the PKG, then reopen Logic so it rescans the current Audio Unit.

Factory Programs

32 programs. Existing program positions are retained wherever this release expands the bank.
