

DIHWorld Audio

Vocal Mic Quick Reference

Silver reference and Gold color decision guide

DIHWorld Audio builds connected production systems around the Imhotep 369 Engine—a Triadic Harmonic Lattice—and Ma'at 357 / MomentumBend. Phi-derived control and the canonical Phi/2 ceiling preserve movement, balance, and musical intent without brickwall limiting.

This edition documents 2 current products. Release numbers are taken from the installed DIHWorld Audio Audio Units verified on 2026-09-05; they are product versions, not a shared catalog version.

Canon reference: normalized $\Phi/2 = 0.809016994$. MomentumBend shapes motion and containment; the ceiling is a canonical boundary, not permission for hard limiting.

Operating law: begin from reset or a purpose-matched preset, compare at equal loudness, change one system at a time, and judge the result in the full arrangement.

Silver reference / Gold color

SILVER is the neutral M50 reference microphone. Use it to establish an honest, level-matched baseline for vocal, acoustic, and monitoring decisions: truth, air, articulation, transient precision, and spatial reveal.

GOLD is the color microphone. Use it only when the arrangement benefits from deliberate harmonic body, presence, soul, weight, or dimensional lift. **GOLD** is not a substitute reference and **SILVER** is not a downstream color stage.

Decision order: gain-match the dry source and **SILVER** first; then compare **GOLD** at the same level; retain the color only if it improves the full arrangement. Do not prescribe a serial **GOLD**-to-**SILVER** chain as a default.
